I am a representative of one of the following groups of attendees?

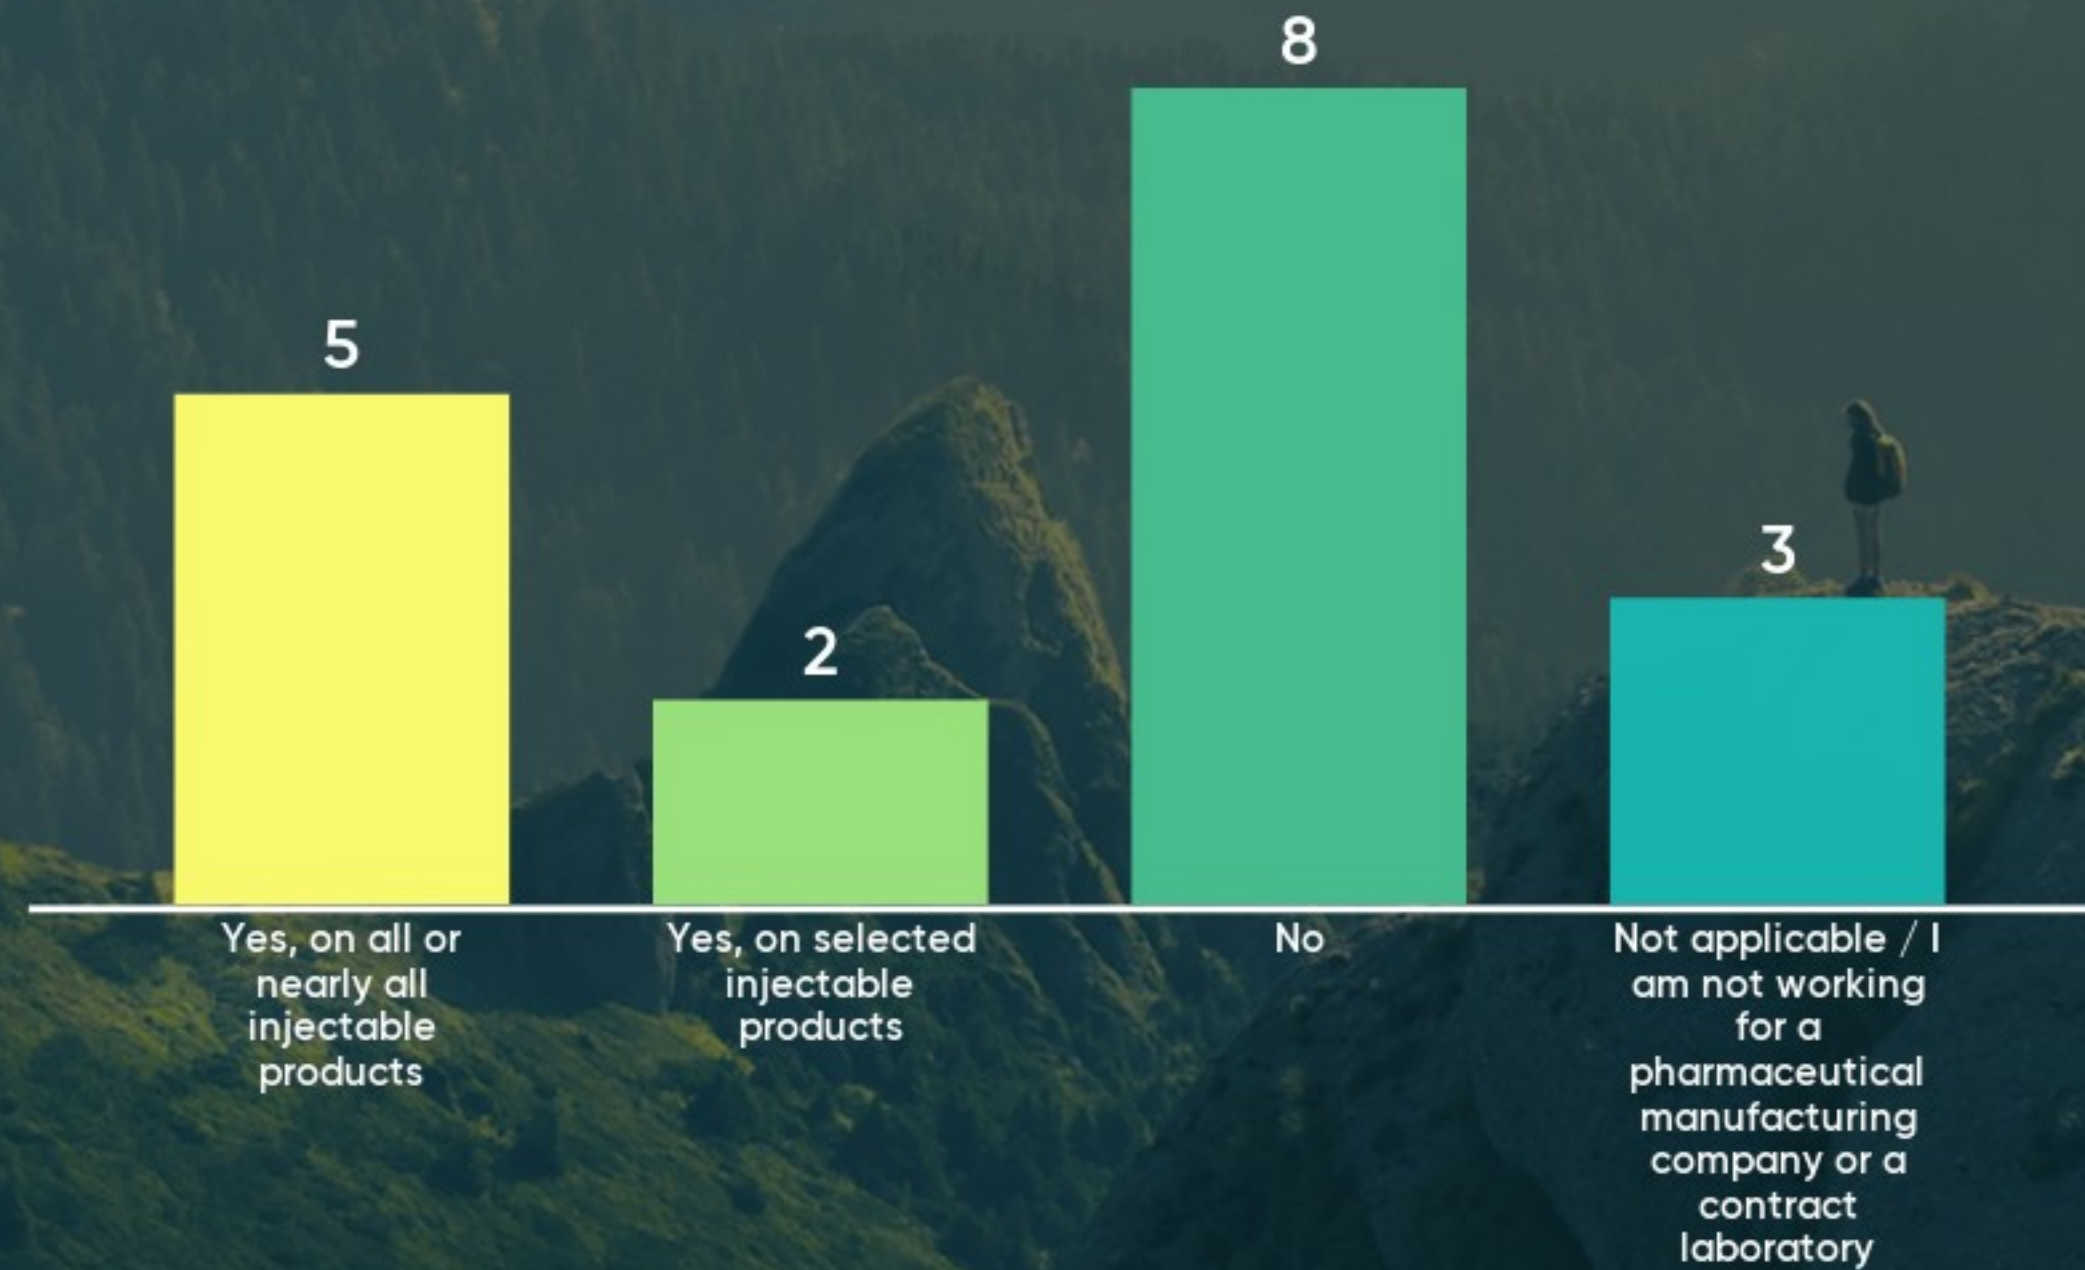

Which Container Closure Integrity Method(s) does your firm perform for leak testing?

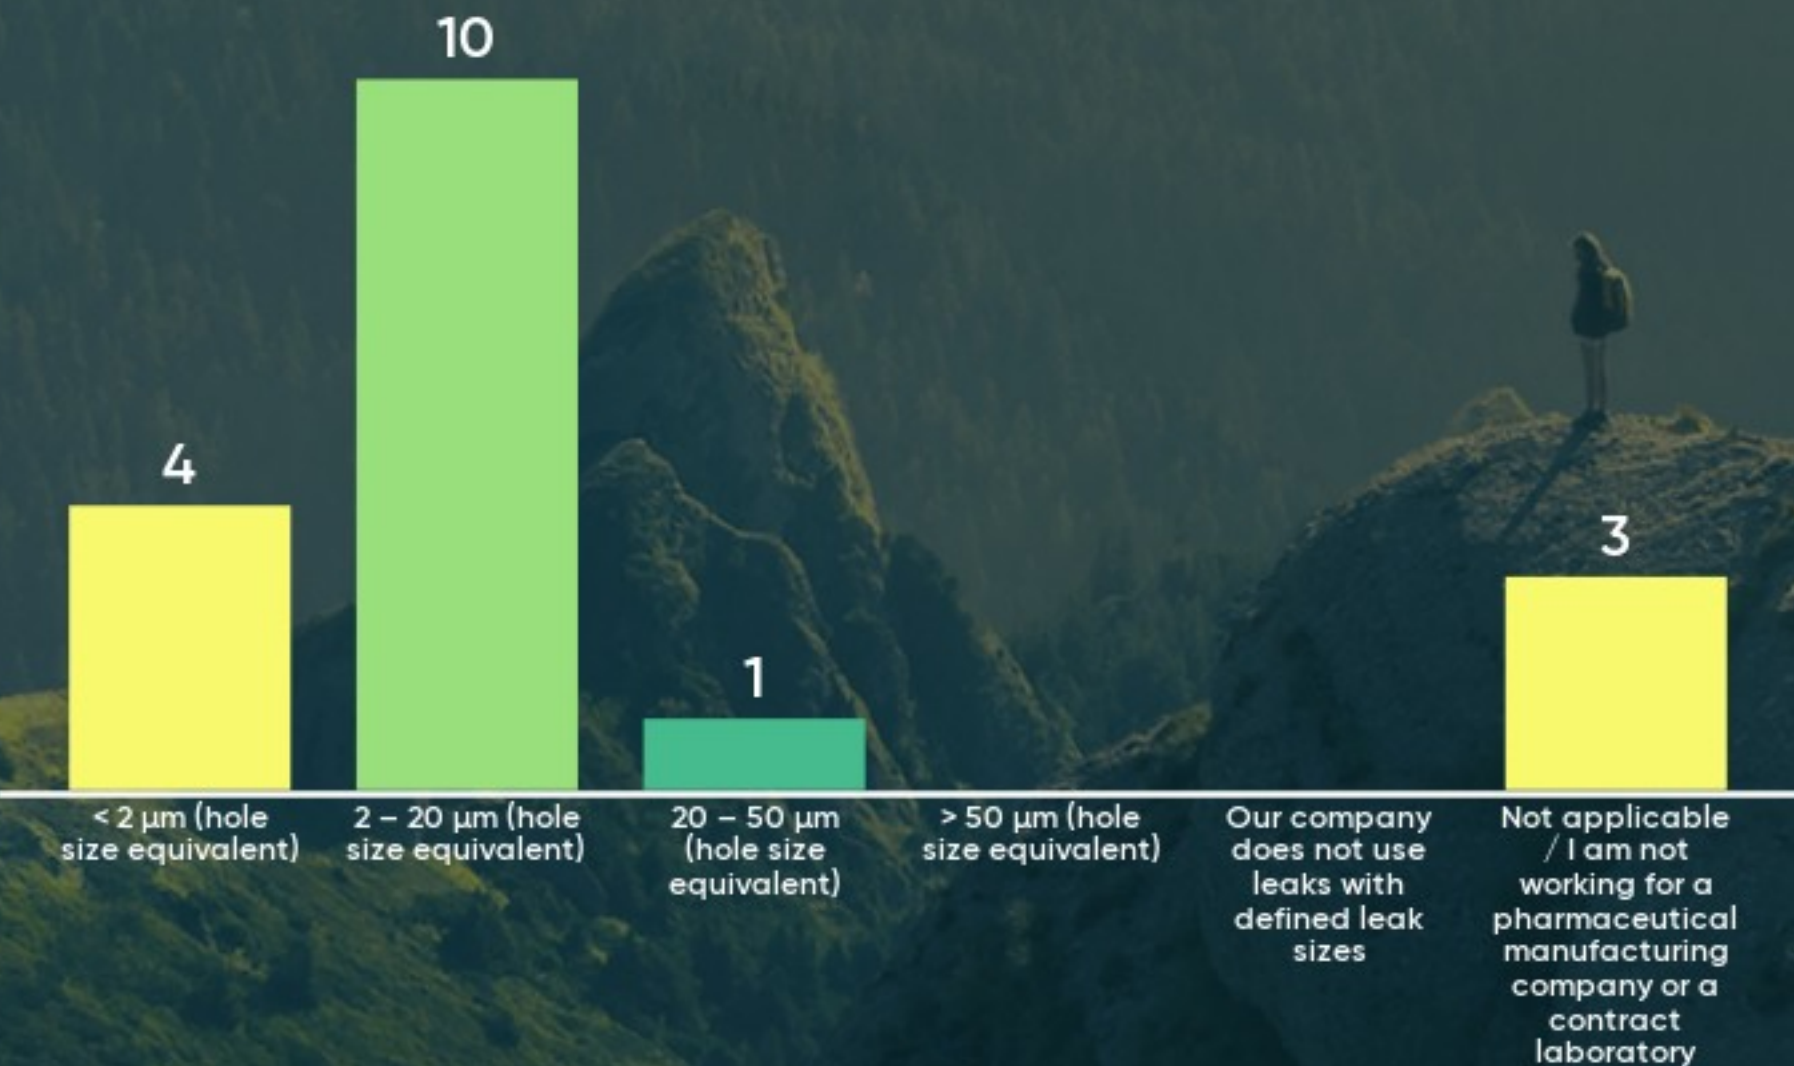

Has the new USP monograph <1207> on CCI testing issued in 2016 triggered changes in your CCI test concepts and/or strategies?

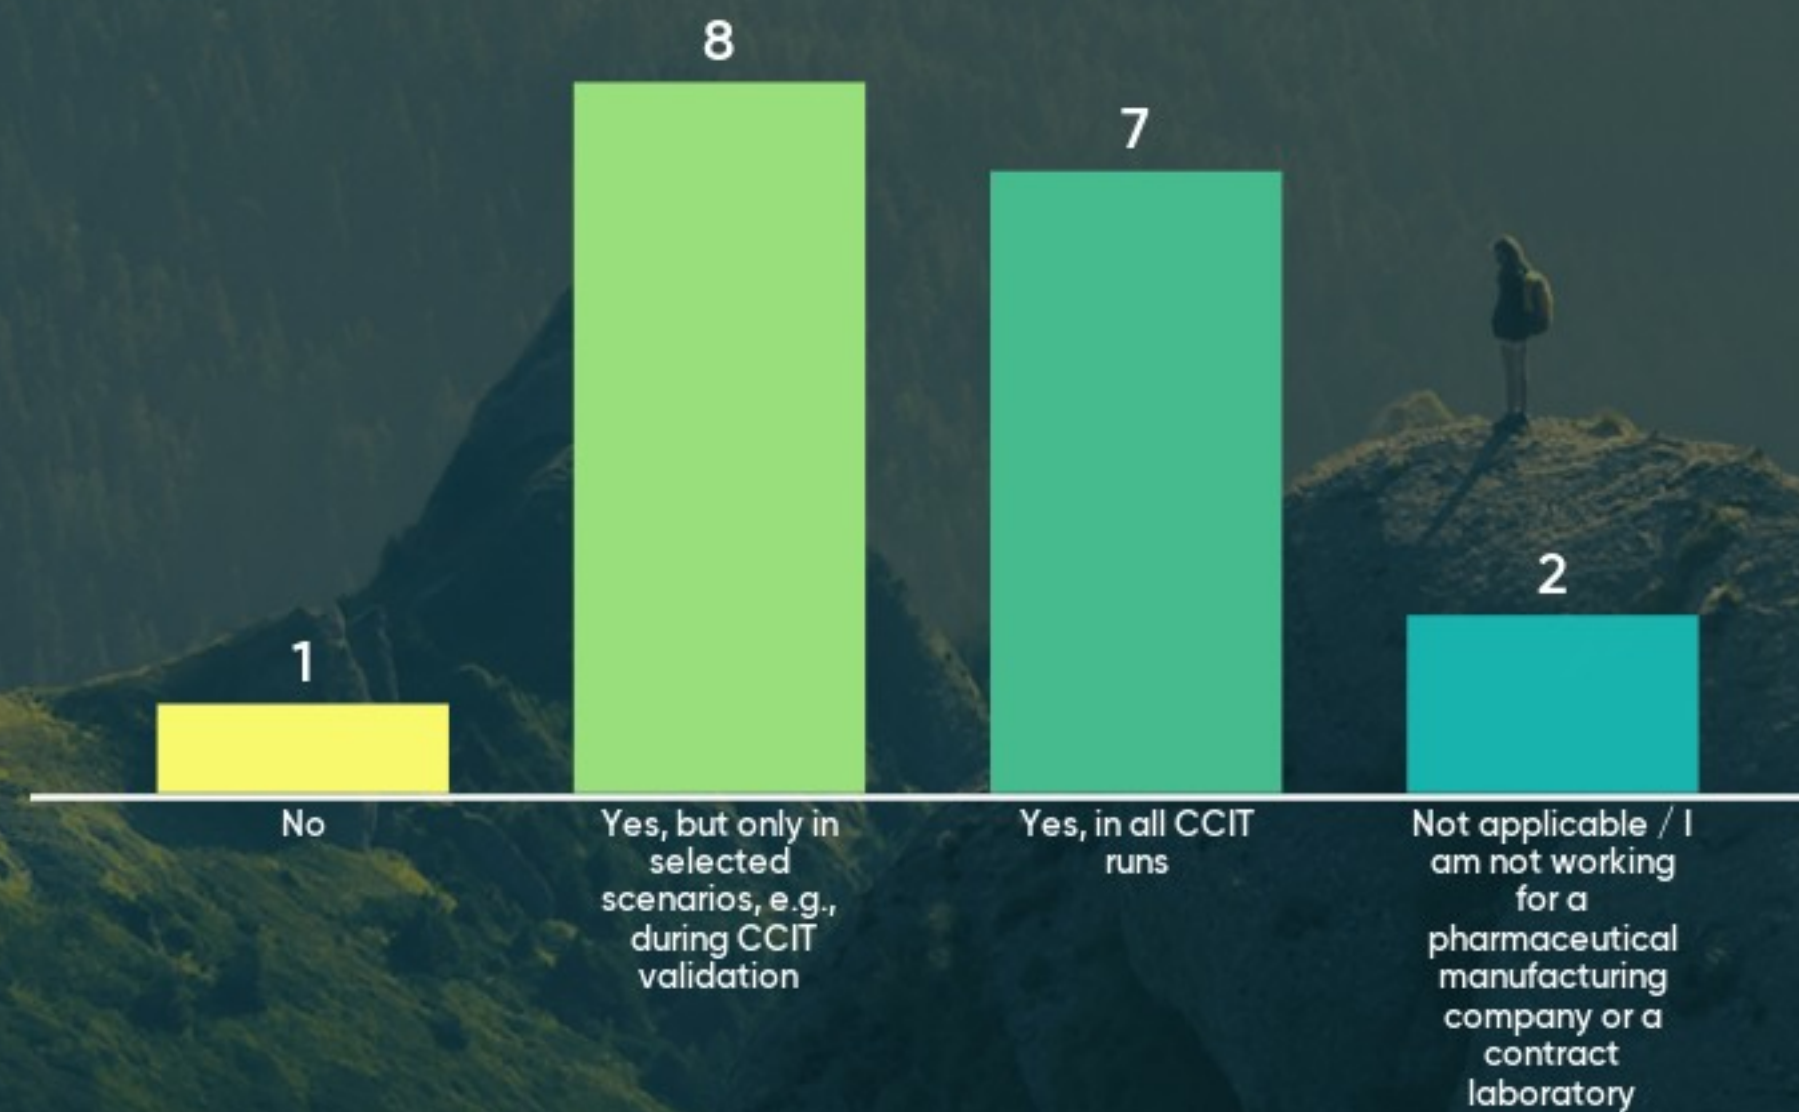

Do you perform 100% leak detection in commercial production?

In our pharmaceutical company, CCIT methods are validated using artificial leaks down to the following leak size:

Do you use positive controls (i.e., actually leaking vials with defined leak sizes) during routine CCI testing?

What type of statistical sampling plan do you use to determine how many samples to test for CCIT at each stability time point during stability study?
