

2016 PDA INDIA CHAPTER MEDIA FILL WORKSHOP

29th November | Vivanta by Taj— Dwarka | Delhi

In the aseptic processing of medicinal products, the product quality usually cannot be ensured by means of lab controls of the final product. Process validation by means of media fills is one of the accepted norms to furnish proof of product safety, which is why it justly is the focus of regulatory requirements and official inspections. A number of revised and harmonised international regulations, especially the FDA Guidance for Industry, Sterile Drug, Products Produced by “Aseptic Processing”, the EU GMP Guide Annex 1, ISO 13408 and the PIC/S Guide “ Recommendation on the Validation of Aseptic Processes”, define highly detailed requirements, the implementation of which is critically examined within the framework of official inspections. In general, the required media fills should be able to simulate both routine operation and worst-case conditions.

For the first time PDA India Chapter brings a platform for discussion , to provide interpretation of guidelines and regulatory action for Media Fill with live case studies and examples.

Participants will have the unique opportunity to discuss -

- Principles of Media Fill
- Regulatory expectations and practical elements
- Designing Media fill studies
- Defining and executing interventions
- Evaluation of Media Fill Failures
- What to do when a run fails

Who will benefit

- Production
- Quality Assurance
- Microbiological Quality Control

who are responsible for the planning and evaluation of Media fill programmes. It is also valuable for decision makers who have to deal with media fill data within the framework of production release and Aseptic Process validation.
