  - Corrective Possibilities
  - Hurdles
  - New Tasks

# NUMBER OF NEW DRUG SHORTAGES

After a rise it seems the problem is under control

# NUMBER OF ACTIVE DRUG SHORTAGE

The carry-over from previous years still causes a major drug shortage problem

## Drug Bust | Low supplies of critical-care medicines plague hospitals

### Percentage of hospitals reporting impacts on patient care

### Number of drugs in short supply\* Percentage of hospitals reporting

\*in the past six months. Percentages may not add to 100 due to rounding.

Source: American Hospital Association analysis of survey data from 820 nonfederal, short-term acute care hospitals collected in June of 2011

# WHAT ARE THE MAJORITY OF DRUG PRODUCTS

Form Type

- Injectables
- Orals
- Inserts/Implants
- Rectals, Topical
- Dermatologicals

Brand-Generic Type

- Generic
- Brand
- Branded Generic
- Other-Branded Generic

Number of Products by Supplier Count

Source: IMS National Sales Perspectives, Sep 2006 – Aug 2011

Drug Shortages: A closer look at products, suppliers and volume volatility.  
Report by the IMS Institute for Healthcare Informatics

# WHAT ARE THE REASONS ?

- Foreign matter in filled product (particulates, fibers etc.)
- Microbial contaminations
- Glass breakage/container closure
- Mislabeling/incorrect product filling

# ECONOMIC DRIVERS CONTRIBUTE

Healthcare Cost Pressure  
Generic Competition  
Shareholder Satisfaction

COGS Reduction

Single  
Site

High  
Throughput

Low Inventory

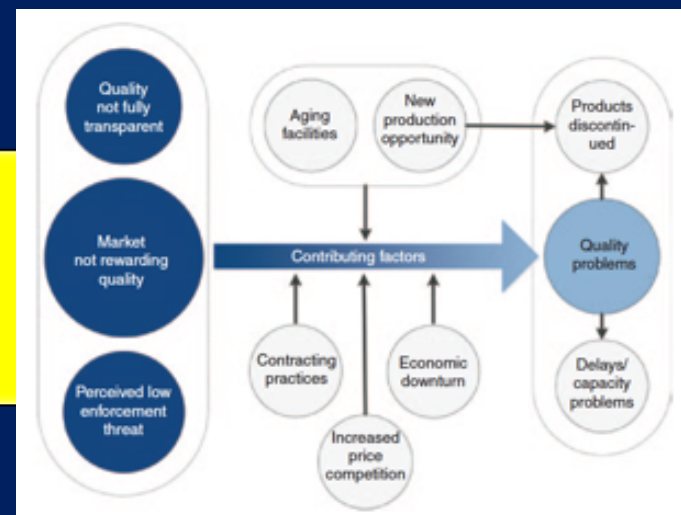

Reduced  
Maintenance

Reduced  
CAPEX

Lower Labor  
Costs

Drug Shortage

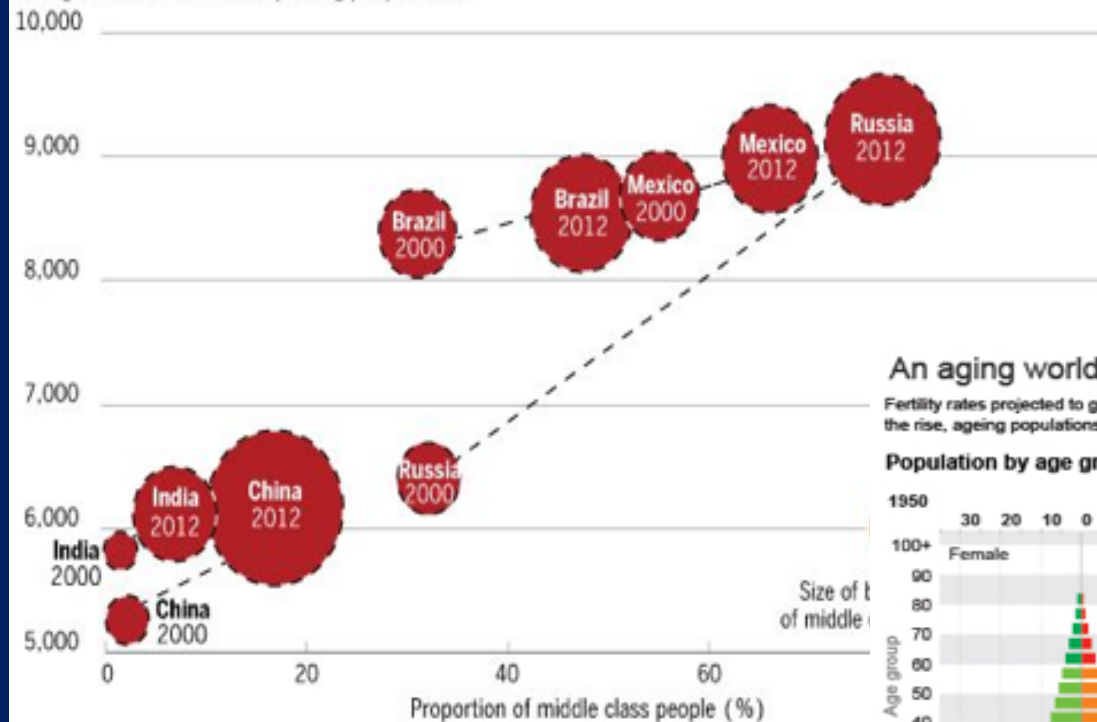

# FUTURE SUPPLY NEEDS

## Middle class in emerging markets

Average annual middle class spending per person \$

Source: OECD Development Centre/Brookings

A rising middle class  
in the BRIC world

An aging  
population

## An aging world

Fertility rates projected to go down and life expectancy on the rise, ageing populations will become a future challenge

### Population by age group and sex Millions

### Regional life expectancy

### Median age of world population

Facility capacity increases are  
needed to fulfill the rapidly  
rising demand

# AGENDA

- IMPLICATIONS
  - Drug Shortage
  - Why
  - Future Capacities
- TASK FORCE
  - Definition
  - Age Related Problems
  - The Task Force & Results
- APPROACHES
  - Corrective Possibilities
  - Hurdles
  - New Tasks

# CURRENT SITUATION – AGING FACILITIES

- A rising scenario, a rising concern
- Can run smoothly, can be a ticking time bomb
- Rapidly aging, when COGS is sole focus
- Major contributor to drug shortage, when the facility is the sole supplier

# CURRENT SITUATION – AGING FACILITIES

If processes are not automated, the precision of manual, human driven steps is crucial

Experience

Defined Tasks

Quality Conscious

Dedication

Pride

Long-term Employee

# AGE CAN MEAN BREAKDOWN

Old wall panel material start to become contaminated

## Risk:

- Quality issues
- Production shut-down
- High remediation costs

The need to decontaminate an entire site

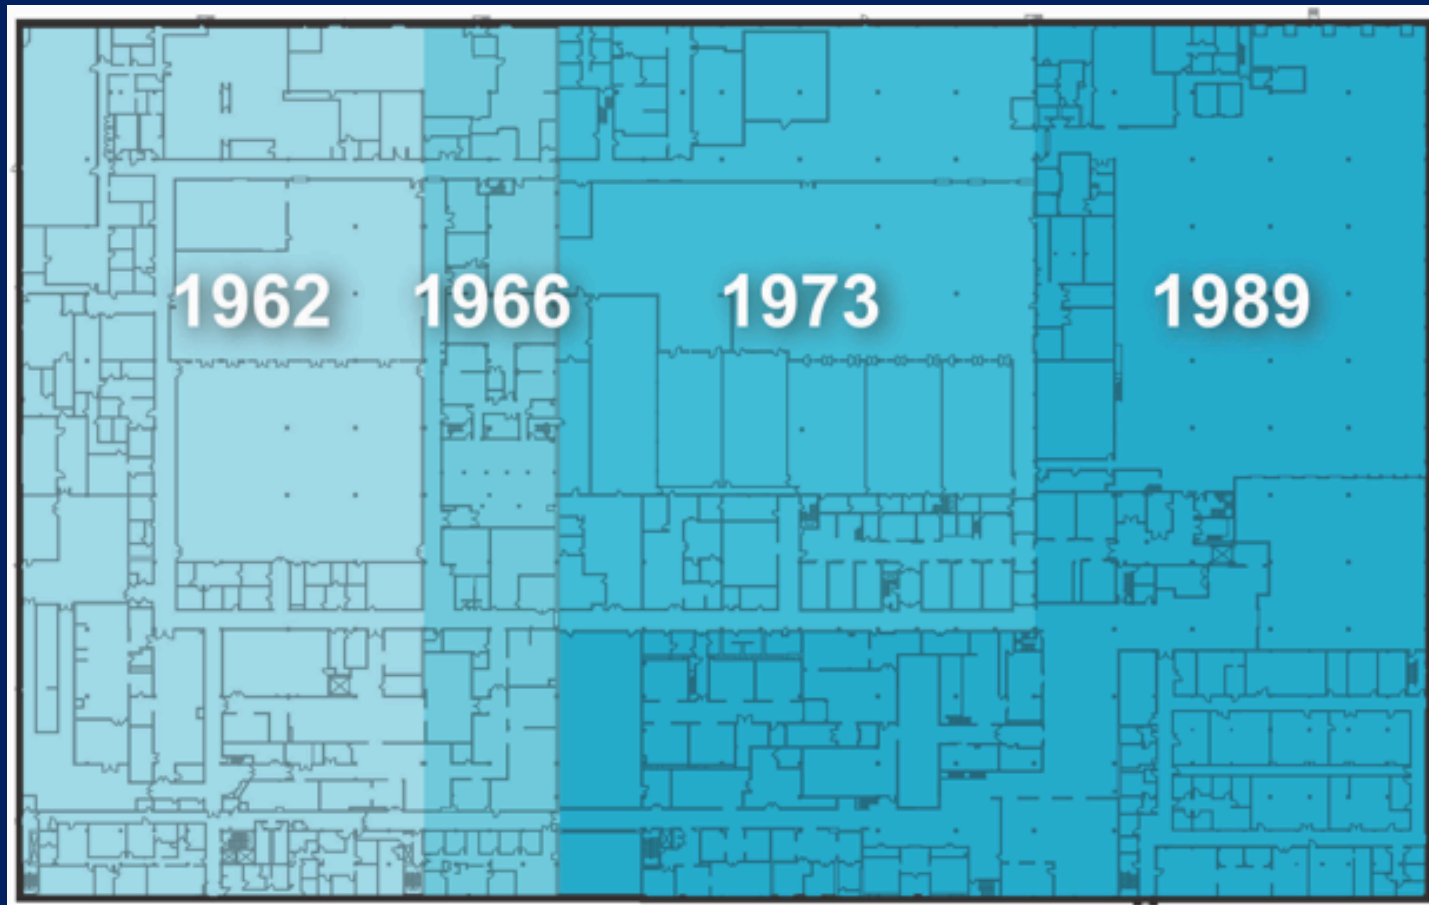

# AGE CAN MEAN SUB-OPTIMAL PROCESSES

## Risk:

- Quality issues
- Unit operation break-down
- Supply problems
- Yield losses

# AGE CAN MEAN MULTIPLE EXPANSIONS

## Risks:

Do we up-grade the quality standards ?

Do we have the right personnel/material/waste flow ?

Are the air handling systems or utilities up-to-par ?

# HOW DO WE PERFORM UP-DATES

Continuous improvements or a seesaw approach; the later being probably motivated by regulators and not own initiatives

Risk:

- Quality issues
- Prolonged up-grade/shut down periods
- High remediation costs

Example:

We do not bring our car to the service when it broke down

# A CASE OF AN AGING FACILITY – BVL

70 Years in service

2011

The FDA found 10 violations of good manufacturing practices during a late 2011 inspection and 48 violations in May 2011

Nov.'11

A recent internal review of documentation indicated that routine preventive maintenance and requalification of some manufacturing equipment did not occur at the specified time interval, and is overdue

>\$300M investment in up-grades

SUN Pharma supplies generic

Oct.'12

Limited production has resumed

Jul.'14

Sold, the story to be continued...

SUN Pharma gets under FDA scrutiny

Dec.'13

Company stops operations

Jun.'13

will concentrate production in the company's newer, more commercially sustainable facilities. Ben Venue will cease production in one of the company's older manufacturing facilities and cease aseptic filling operations of drugs manufactured in the company's oldest manufacturing facility

Jan.'13

announced that it has voluntarily entered into a consent decree with the U.S. Food and Drug Administration (FDA) that relates to current Good Manufacturing Practice requirements.

**Doxil Drug Shortage**

# AGING FACILITY ACTIVITIES

Formation of Facility/Process/Analytics Subteams

PDA Aging Facility Workshop 2015

# AGING FACILITIES DEFINITIONS

# AGING FACILITY DEFINITIONS

- **Facility:** Structure and building wide systems that support manufacturing operations (e.g. wall/ceiling/floor composition and layout, water systems, compressed air systems, clean steam systems, automated facility control systems (including systems such as LIMS, SAP and others), HVAC systems, etc.). Personnel, material and waste flows, overall facility layouts including cleanroom classifications and pressure cascades.
- **Process:** The manufacturing process (e.g. formulation, sterilization, filling, etc.) and related equipment specific to that process (e.g. bio reactors, process vessels, filling lines, lyophilizers, CIP systems, etc.) Process flows, product transfers and flow of raw materials or components into the process unit operations.
- **Analytics:** In process tests performed during the manufacturing process (e.g. host cell proteins, biuret, conductivity, pH, potency, pre-filtration total microbial count, sterility, etc.) inline testing, process analytical technology tools, sensor technology, signal and test result capture via automation, the resulting statistics and potential corrections. Possible simulation tools, which can mimic specific quality, attribute shifts if changes are made. Sampling points, activities and testing.

# AGING FACILITY ACTIVITIES

Formation of Facility/Process/Analytics Subteams

PDA Aging Facility Workshop 2015

PDA Survey and Survey Report

# SURVEY RESULT SUMMARY

## PDA Survey

2015 Aging Facilities

### Table of Contents

INTRODUCTION	1
SUMMARY OF RESULTS	1
CONCLUSIONS	3
GENERAL INFORMATION AND DEMOGRAPHICS	4
FACILITY SPECIFIC QUESTIONS	6
PRODUCT SPECIFIC QUESTIONS	10
AGING FACILITY DEFINING QUESTIONS	11
PROCESS SPECIFIC QUESTION	12
IMPROVEMENT SPECIFIC QUESTIONS	13

# SURVEY RESULT SUMMARY

- Survey showed that most sites and products are older (>11 years = >80%)
- 73% of respondents say the facility runs good or excellent
- Aging is seen as dated technologies, frequent breakdowns, not meeting requirements
- Batch rejection rate is fairly high (>5% of 18% respondents)
- Very low portion of respondents perform in-process analytics or perform improvements
- Regulatory requirements encourage modernization and risk assessments are used extensively
- Improvements are mainly made to facilities, not to process and analytics
- Technology scouting is hardly ever done

# AGING FACILITY ACTIVITIES

Formation of Facility/Process/Analytics Subteams

PDA Aging Facility Workshop 2015

PDA Survey and Survey Report

Assembly of questions by task force members

Answers of questionnaire

Points to Consider Document

Revised → Board ballot

# AGING FACILITY QUESTIONS POSTED

Q1. How can enhanced maintenance programs (e.g., Total Productive Maintenance – TPM) be employed to retard the facility aging process and extend the life of current facilities?
Q2. Which building systems are most susceptible to performance deterioration due to age and what can be done to remediate these?
Q3. How can risk management methodology be used to evaluate and improve aging facility performance?
Q4. Older facilities may have architectural features (e.g., wall and floor finishes) that may be considered to be below modern standards (e.g., difficult to clean, possible cross-contamination hazards). What is the value-added proposition to remediate these?
Q5. How can enhanced process controls and/or analytical technology be employed to extend the life of aging process equipment?
Q6. How are existing facilities affected by revised international standards, such as ISO 14644?
Q7. How viable is the concept of re-purposing existing out-of-service facilities?
Q8. How would you <u>perceive</u> that your facility is aging, when you are living with it every day?
Q9. What do you suspect a regulator/health Authority would be looking for to determine whether you have an aging facility?
Q10. Could a robust <u>predictive</u> maintenance program, as opposed to a compliant preventive maintenance program, keep a facility from aging?
Q11. Is a painted surface, as opposed to a non-painted non-corrosive washable surface, a sign of an aging facility?
Q12. How many times can a facility be piece-meal renovated before it is time to start with a blank piece of paper?
Q13. Is an upward trend in deviations involving equipment and processes a signal of an aging facility?
Q14. What is an aging facility?
Q15. How do you know that you facility is aging?
Q16. Is there a trigger point which determines that you are having an aging facility?
Q17. Which parameters to monitor for determine aging facility?
Q18. What do you need to take into consideration when modernizing a facility?
Q19. Which risk model to use for evaluating whether my facility is aging?
Q20. Can you maintain the facility to ensure that it is not aging?
Q21. What are the major reasons for not modernizing the facility?
Q22. How do you know what is cGMP in relation to facilities?
Q23. What risk do you take when producing in an aging facility?
Q24. Why are we using aging facilities?
Q25. Does the level of recapitalization warrant a facility design evaluation?
Q26. As needs for modernization are identified are process flows (equipment/people/materials) acceptable for continued operation?
Q27. How do maintenance costs factor into analysis of recapitalization vs repair? (Are ongoing maintenance costs excessive when compared to re-capitalization?)
Q28. Do updated building codes warrant a new facility vs retro-fit?
Q29. Does the underlying infrastructure support process recapitalization (utility distribution piping, electrical distribution, water system, structural elements)?
Q30. How do changes in regulatory expectations impact facility recapitalization plans (Does the existing facility comply with intent and/or letter of regulatory expectations)?
Q31. Are hazardous/dangerous materials of construction within the facility and are remediation plans in place?
Q32. Have special considerations for soil exposure / adulteration of the clean space recovery been considered as part of recapitalization plan?
Q33. Has a Resource Assessment program been put in place and how does it impact facility modernization plans?
How do we reduce the fear of change?
Q34. Is a Brownfield project - installing new operations in an old building, considered an aging facility upgrade?
Q35. Is a Process Retrofit - installing new process equipment in an operating pharmaceutical facility, considered an aging facility upgrade?
Q36. What components should be included in the business case to justify/ demonstrate the need for a facility upgrade?
Q37. Is the risk of not changing greater than the risk of making a change?
Q38. How do you document or prove that the need for modification if not admission that the past operation was inadequate?
Q39. What is a strategy for grouping modifications to reduce downtime, regulatory, and validation efforts?
Q40. What is the process to identify, justify, plan, review, and approve changes?

Task Force Team assembled 89 questions using the workshop, survey and other member input

Q41. How are architectural modifications, affecting flow and growing areas, handled within an existing pharmaceutical facility?
Q42. How is HVAC equipment replacement handled for an existing line?
Q43. How is Utility equipment replacement/ upgrades handled for an existing and operating facility?
Q44. What is an aging process?
Q45. What risk assessment tool should be used?
Q46. Can we learn from years of process data? Can we determine and document that the critical process variables are more or less critical than originally thought?
Q47. Is the process to implement an upgrade any easier, if there is a long history of the new equipment operating successfully and better in similar installations?
Q48. If a process appears to be "under control" based on the data gathered, is there a responsibility to learn from past data to improve the operation?
Q49. How is process equipment replacement handled for an existing line?
Q50. How are instrument replacements handled?
Q51. How are control system replacements handled?
Q52. How should years of past process data be maintained after upgrading a process control system?
Q53. How do you handle different regulatory authorities in different markets?
Q54. How can obtaining stability data be streamlined?
Q55. Can a Comparability Protocol be used to help validation of facility modifications?
Q56. Can an Operability Protocol be used to compare pre and post-change operation? Note (Not sure what Operability Protocol is Referring to?)
Q57. Can a family approach be used to help validation of facility modifications?
Q58. Is it better to validate modifications that use an old technology previously validated in the facility, or modifications using a new technology that is the current industry standard?
Q59. If older processes don't have the design space defined to current standards, can it be defined prior to starting a new process validation?
Q60. How can statistical methods be upgraded/ optimized?
Q61. How can new analytical instruments be implemented?
Q62. Can rapid-micro be implemented?
Q63. How do you interpret old data?
Q64. How can data analytics be applied to reducing the risks associated with operating aging manufacturing facilities?
Q65. What are some best practices for managing the post-approval change process for an aging facility?
Q66. How can I construct a business case for modernizing an aging facility?
Q67. Are there some instructive warning letters that are directly related to the failure to modernize an aging facility?
Q68. What do I do when the Pharmacopoeias revise a method/specification and it is not consistent with my registered specifications/test method?
Q69. What do I do when, after switching to a more modern methodology (i.e. HPLC to UPLC), a new unknown impurity peak is detected?
Q70. What do I do when I can no longer get an equivalent replacement piece of equipment for a method (i.e. Atomic Absorption)?
Q71. How do I determine a suitable replacement column for my HPLC when the manufacturer of the original column discontinues making it.
Q72. How do I validate and integrate laboratory data systems into my operation? What do I do if the company no longer supports the product version I use?
Q73. When should a company begin considering modernizing a facility?
Q74. What approaches can be used to help inspectors understand my facility modernization plan?
Q75. What factors should be considered when planning the rate of facility modernization?
Q76. For facilities that manufacture product for global markets what are some of the regulatory filing factors that should be considered in a facility modernization plan?
Q77. How to update, maintain and document cleaning procedures (CIP/SIP) in aging facilities?
Q78. How to convert aging facilities to closed operation?
Q79. How to convince the C-Suite to make necessary changes, what are the benefit propositions and how to bring them concisely forward?
Q80. What is the most known "pain factor" to get rapidly motivated to change a facility or process?
Q81. What facility and process materials and designs are considered modern or up to date?
Q82. What facility layouts are required to accommodate new process technologies and designs and how can aged facilities be converted?

## Consolidated Question #1:

What components should be included when evaluating the need to modernize a facility or process and what factors often prevent companies from moving forward with modernization plans?

### Touched on in the answer:

- Q.08. How would you recognize that your facility is aging, when you are living with it every day?
- Q.15. How do you know that your facility is aging?
- Q.16. Is there a trigger point which determines that you are having an aging facility?
- Q.21. What are the major reasons for not modernizing the facility?
- Q.29. Does the underlying infrastructure support process recapitalization (utility distribution piping, electrical distribution, water system, structural elements)?
- Q.35. How do we reduce the fear of change?
- Q.38. What components should be included in the business case to justify/ demonstrate the need for a facility upgrade?
- Q.39. Is the risk of not changing greater than the risk of making a change?
- Q.71. How can I construct a business case for modernizing an aging facility?
- Q.88. How to convince the C-Suite to make necessary changes, what are the benefit propositions and how to bring them concisely forward?
- Q.80. When should a company begin considering modernizing a facility?

# AGING FACILITY OUTCOME

## PDA Points to Consider for Aging Facilities

Draft 23Jan2017

## Points to Consider for Aging Facilities

### Table of Contents

<b>I. Introduction .....</b>	<b>5</b>
<b>II. Recognizing A Facility is Aging .....</b>	<b>5</b>
Q1. What indicators should be evaluated to determine if a facility or process is aging? .....	5
Facility/Equipment .....	5
Process/Supply .....	6
<b>III. Impediments to Modernization .....</b>	<b>7</b>
Q2. What factors often prevent companies from moving forward with modernization plans? .....	7
Regulatory Timing .....	7
Risk and Cost .....	8
Lack of Knowledge .....	8
Q3. How do to reduce the fear of change? .....	8
<b>IV. Business Case for Modernization .....</b>	<b>9</b>
Q4. What components should be included in the business case to demonstrate the need for a facility upgrade? .....	9
Q5. How does a recapitalization plan fit into facility modernization? .....	9
Q6. How viable is the concept of re-purposing existing out-of-service facilities? .....	9
Q7. How many times can a facility be partially renovated? .....	10
<b>V. Strategies for Modernization .....</b>	<b>10</b>
Q8. What are some strategies for addressing an aging facility? .....	10
Modernizing the Existing Facility .....	11
Maintaining a Facility when the Decision has been made to Build a New One .....	12
Q9. How can analytical instruments be modernized? .....	12
Replacement of Existing Equipment using the Same Technology .....	12
Replacement of Existing Equipment with New Technology .....	13
Q10. How can risk management be applied to modernizing a facility or process? .....	13
Q11. How can risk management help determine a cost-effective strategy for process and facility upgrade? .....	15
Q12. What are some strategies for modernizing a process? .....	15
Strategies for ongoing modernization of a new process or one that has been recently modernized .....	15
Strategies for modernization of an older process that has not been updated routinely .....	17

# AGENDA

- IMPLICATIONS
  - Drug Shortage
  - Why
  - Future Capacities
- TASK FORCE
  - Definition
  - Age Related Problems
  - The Task Force & Results
- APPROACHES
  - Corrective Possibilities
  - Hurdles
  - New Tasks

# POSSIBILITIES – RETROFITTING PROCESSES

Needed  
conversion

# POSSIBILITIES – RETROFITTING PROCESSES

From large scale stainless steel to medium volume single-use

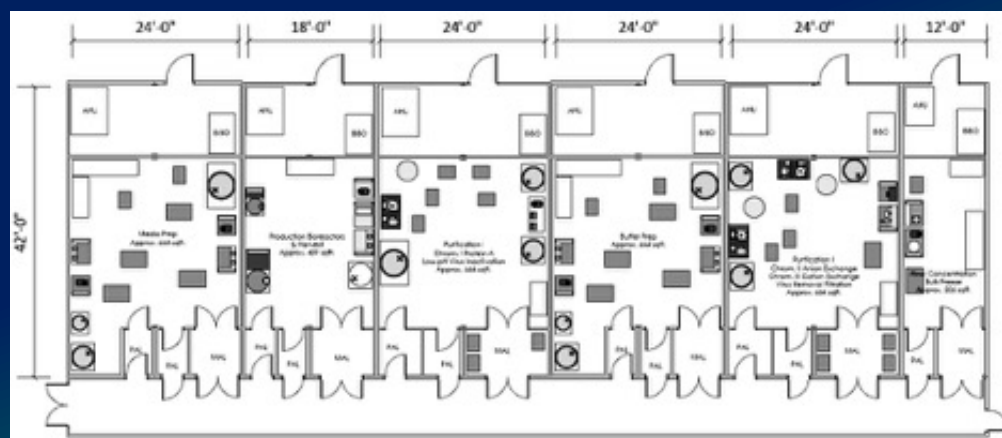

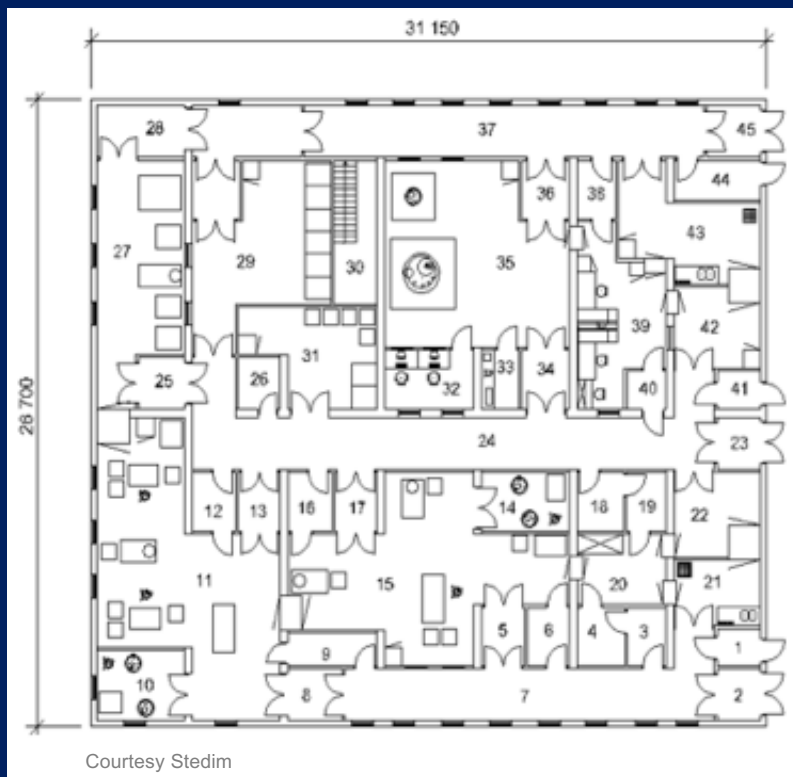

De-risking  
Higher flexibility  
Faster turn-around  
Closed systems  
Advanced PAT

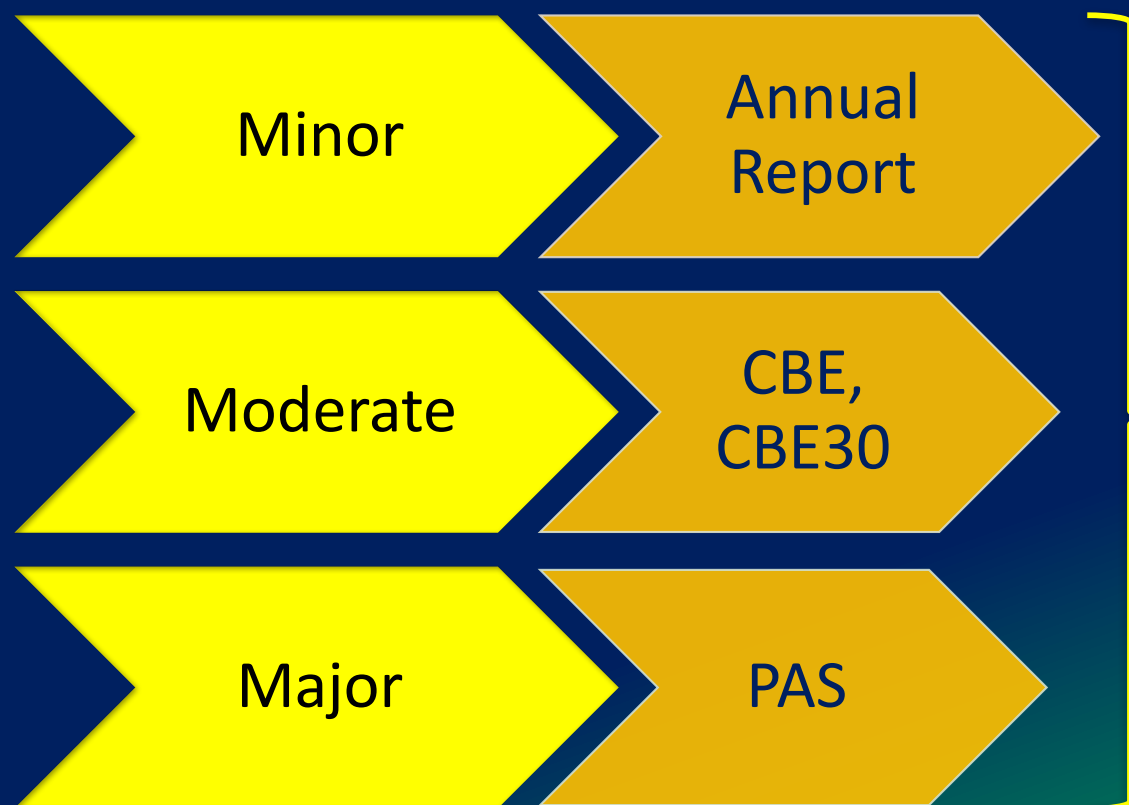

# THE GRAIN OF SALT...

Single-use technology processes create flexibility & speed, but...

...is only as flexible as the surrounding infrastructure !

# NEEDED – DEFINING & HARMONIZING

What is what, can mean:

- Substantial resources drain
- Lowering the motivation of change/improvement
- Mothballing facilities

The PDA Task Force PAC IM needs to address change classifications and regulatory actions for example harmonization

# NEEDED – NEW APPROACHES

# ....WE CAME A LONG WAY THOUGH !

PHARMACEUTICAL PRODUCTS.

We are now sending to Physicians throughout the United States literature and samples of

## ASPIRIN

The substitute for the Salicylates, agreeable of taste, free from unpleasant after-effects.

## HEROIN

The Relative for Coughs,  
**HEROIN HYDROCHLORIDE**  
Its water-soluble salt.  
You will have call for them. Order a supply from your jobber.

Write for literature to \_\_\_\_\_ D.

## COCAINE

### TOOTHACHE DROPS

Instantaneous Cure!  
PRICE 15 CENTS.  
Prepared by the

For sale by all Druggists.  
(Registered March 1886.) See other slide
